South Sudan

"Our hope Our Dream"

The resilience, the courage, hope and dream of the people of South Sudan shall never be stopped.

South Sudan gained independence in 2011 with highly visible hope and excitement as hundreds of thousands citizens trooped back to their country to rebuild lives after such a long war

The journey has been with a lot of challenges expected in such an embarkment, much has been gained and much is still desired. In 2014 the country witnessed political upheaval seeing loss of life, thousands displaced, livelihoods destroyed. Still the citizen's resilience is strong and the homeland peace and stability has driven the hope this far.

VSF G, has witnessed this journey since 1997, has witnessed communities over come enormous challenges and rebound back to hope! VSF G has continued supporting the communities to enhance their capacities to protect community's livelihood assets especially those where livestock is the base to household food security.

VSF G continues to program its interventions under emergency conditions especially Greater Upper Nile States which include emergency animal health activities (CAHWs trainings, treatments and vaccinations including small stock and cold chain support), food distributions (cereals and animal products – meat and milk).

In Bar el Ghazal (Warrap and Western Bar el Ghazal) more development oriented support is ongoing in Agriculture Production including poultry production targeting women (Community extension system, livestock marketing, and crop production and community Lead Savings activities as well as animal traction promotion.

The main donors include European Union, BMZ, GiZ, UN Common Humanitarian Fund (CHF) and FAO's pipeline input support.
